

Client Security Upgrades Waiver

Due to the current increase in hack attempts on Remote Desktop Servers as well as Office 365 email systems, we are strongly recommending the implementation of the following 2 items as a bare minimum to secure all our clients' IT systems.

- Office 365 Multi-Factor authentication (MFA)
- Access to Remote Desktop Servers via secure VPN

Should you choose to ignore these recommendations, you agree that Ginko IT cannot be held responsible for any damages or loss of data/income and that any work required to remediate issues arising from related security breaches will be chargeable regardless of any current maintenance contracts.

If you understand the risks and potential charges involved, but still want to ignore the above security items, please print / scan and enter your name, date and sign below:

Please forward this in an email to support@ginko.com.au
